Re: Senior Staff Applied Scientist, Time Series & Demand Forecasting - Kinaxis (Remote (Canada))

Dear Hiring Manager,

I am applying for the Senior Staff Applied Scientist, Time Series & Demand Forecasting role at Kinaxis. I am a machine learning researcher with a PhD from the University of Trento (2025) and 10+ years across industry and academia, with time-series modeling and benchmark design at the centre of my work. My most recent published system made real-time decisions in 14 ms on a Raspberry Pi 4 at F1 0.76, 74× faster than the DTW baseline it replaced (JAES 2026).

Here is how my work maps to the role:

- **Scientific rigor and benchmarks.** I design benchmark suites with baselines and ablations to quantify architecture and feature trade-offs, and I released four open datasets (9,800+ recordings) so results can be reproduced. My latest benchmark compares 6 methods over 100,000 scored trials.
- **Time-series in production.** On the EU-funded MUSMET project I owned pipelines for streaming multi-dimensional data from acquisition to deployment (<30 ms, >90% F1). At MAS Holdings I built ingestion and ETL for high-frequency IoT time series across distributed sites, with quality checks and monitoring.
- **Technical direction.** I mentored engineers and established code review and CI/CD practices at MAS, and at Trento I documented reproducible pipelines for long-term maintainability.

To be direct about the gaps: this is a senior-staff scope. I have not done demand forecasting, hierarchical or intermittent demand, supply-chain work, or Spark at millions of series, and I have not led multiple teams. My time-series background is sensor, audio and IoT data. I could contribute most on evaluation standards, reproducible experiment-to-validation practice and moving prototypes to production, and I would be honest that this may be a level above my track record.

I am based in Toronto, a Canadian permanent resident eligible to work in Canada without sponsorship, and available immediately. I would welcome the opportunity to discuss the forecasting science agenda at Kinaxis.

Sincerely,

Nishal Stanislaus Silva, PhD
