Re: Applied Scientist II, Alexa Daily Essentials - Amazon (Vancouver, BC)

Dear Hiring Manager,

I am applying for the Applied Scientist II, Alexa Daily Essentials role at Amazon. I am a machine learning researcher with a PhD from the University of Trento (2025) and 10+ years across industry and academia, with evaluation design at the centre of my work. My most recent published system made real-time decisions in 14 ms on a Raspberry Pi 4 at F1 0.76, 74× faster than the DTW baseline it replaced (JAES 2026).

Here is how my work maps to the role:

- **Evaluation frameworks.** I build benchmark suites with baselines, ablations and regression checks, most recently 6 methods over 100,000 scored trials (best ROC-AUC 0.822 vs. 0.599 baseline), and I released four open datasets (9,800+ recordings).
- **Concept to launch.** I prototyped and deployed systems from idea to production at MAS Holdings and on the EU-funded MUSMET project (<30 ms inference, >90% F1), with 10+ peer-reviewed publications (JAES, IEEE).
- **Agentic tooling.** I use Claude Code daily for agentic development, and I work with LLM and RAG tooling at the application level.

To be direct about the gaps: I have not built multi-step agentic products, applied reinforcement learning to agent behaviour, or built LLM-as-judge pipelines in production. My profile is strongest on evaluation rigor, real-time systems and shipping. This role leans toward foundation-model agents, so I would be learning that part on the job.

I am a Canadian permanent resident, eligible to work in Canada without sponsorship, available immediately, and willing to relocate to Vancouver. I would welcome the opportunity to discuss how I can contribute to the Alexa Daily Essentials team at Amazon.

Sincerely,

Nishal Stanislaus Silva, PhD
