Re: Applied Scientist, Amazon Canada Technology - Amazon Canada (Toronto, ON)

Dear Hiring Manager,

I am applying for the Applied Scientist, Amazon Canada Technology position at Amazon Canada. I am a machine learning researcher with a PhD from the University of Trento (2025) and 10+ years across industry and academia, with experimentation and error analysis at the core of my work. My most recent published system made real-time decisions in 14 ms on a Raspberry Pi 4 at F1 0.76, 74× faster than the DTW baseline it replaced (JAES 2026).

Here is how my work maps to the role:

- **Experiments and metrics.** I design offline evaluations with baselines and ablations and analyse failure segments, most recently 6 methods over 100,000 scored trials (ROC-AUC 0.822 vs. 0.599 baseline).
- **Models for business applications.** At MAS Holdings I led ML and computer-vision systems in manufacturing, improving operational efficiency by up to 300%, and at Forestpin I built scoring pipelines on large enterprise datasets.
- **Python, C++ and large-scale data.** I work daily in Python and C++17, with Airflow, Snowflake and AWS pipelines, and I use Claude Code for agentic development.

To be direct about the gaps: I have not trained LLMs with continued pre-training or reinforcement learning, I have not worked on e-commerce search or ranking at scale, and my French is basic (A2, actively learning), which matters for a role that reasons in both English and French. I would contribute most on rigorous experimentation and error analysis.

I am a Canadian permanent resident, eligible to work in Canada without sponsorship, based in Toronto, and available immediately. I would welcome the opportunity to discuss how I can support Amazon Canada's shopping experience.

Sincerely,

Nishal Stanislaus Silva, PhD
