**Re: Senior Research Engineer, Safety Tooling and Data – Cohere**

Dear Hiring Manager,

I am applying for the Senior Research Engineer, Safety Tooling and Data role at Cohere. I am a machine learning research engineer with a PhD from the University of Trento and 10+ years across industry and academia. The part of the role that fits my work best is owning the data infrastructure that sits between data collection and model experiments. At Trento I owned full ML pipelines for streaming multi-dimensional data, from acquisition and feature engineering through training, evaluation, and deployment with monitoring, and the real-time inference services ran at under 30 ms latency.

On the data side, I designed and released four open datasets on Zenodo (70+ musicians), including the collection protocols, validation, and documentation. I also designed benchmark suites with baselines and ablations to quantify architecture and feature tradeoffs, and at McGill I explored diffusion-based and VAE-based synthetic data generation alongside real data to improve robustness under limited labeled data. At MAS Holdings I built real-time ingestion and ETL pipelines with quality checks and monitoring, and led ML systems that improved operational efficiency by up to 300%. In each case I made the architecture decisions and owned the work from conception to deployment.

Cohere's focus on tooling that tightens experiment cycles and improves data coverage is the kind of problem I like: pipelines that other researchers rely on, with documented standards. To be direct about gaps, my safety and trust experience is limited to evaluation and human-in-the-loop systems rather than model safety research, and I have used SQL and Snowflake rather than BigQuery. I pick up new tooling quickly and I am happy to work in the UK, Europe, or ET time zone window.

I am a Canadian permanent resident based in Toronto, ON, eligible to work without sponsorship, and available immediately. I would welcome the opportunity to discuss how my experience in data pipelines and benchmarking can support the Modelling Safety and Trust team at Cohere. My portfolio, publications and open datasets are available at nishal.xyz.

Sincerely,

**Nishal Stanislaus Silva**, PhD
