Re: Senior C++ Programmer - Machine Learning – Ubisoft Montréal

Dear Hiring Manager,

I am applying for the Senior C++ Programmer - Machine Learning role at Ubisoft Montréal. I am a Machine Learning Engineer with a PhD (University of Trento, 2025) and 10+ years across industry and academia. I build ML systems in C++ and Python that run on constrained hardware under hard latency limits, and I would like to bring that to the inference engines and tools behind your games.

Three parts of your posting match my work directly. For inference under tight budgets, my published system runs at 14 ms on a Raspberry Pi 4, 74x faster than the DTW baseline (Journal of the Audio Engineering Society, 2026), with F1 of 0.76, and I owned it from data acquisition to deployment and monitoring. For C++ library work, I released Nebula, an open-source C++17 feature-extraction library with per-feature latency benchmarking on ARM, and at MAS Holdings I wrote custom C++ for real-time inference and closed-loop PLC integration on embedded hardware. For measuring models, I design benchmark suites with baselines and ablations, and I write unit and integration tests for the pipelines I ship.

I should be direct about the gaps. I have written C++ since my years at MAS Holdings, but it has been in embedded and real-time systems rather than shipped games, and I have only used Unity lightly, for mixed-reality concert work. I have not yet accelerated models on NPUs or GPUs inside a game engine; my edge work has been CPU-bound on ARM, plus GPU training for deep learning. I have profiled and optimised under strict budgets, and I expect to extend that quickly. What draws me to Ubisoft is a team that ships ML in real time to players, where performance and maintainability matter equally. I spent a research stint at McGill in Montréal in 2024. My French is basic (about A2) and improving, and I would work in English.

I am a Canadian permanent resident based in Toronto, ON, eligible to work without sponsorship, available immediately, and open to relocating to Montréal. I would welcome the opportunity to discuss how my experience in C++ and real-time ML can support your ML programming team at Ubisoft Montréal. My portfolio, publications and open datasets are available at nishal.xyz.

Sincerely,

Nishal Stanislaus Silva, PhD
