Re: Machine Learning Engineer – BMO

Dear Hiring Manager,

I am applying for the Machine Learning Engineer role (R260027183) at BMO in Toronto. I am a Machine Learning Engineer with a PhD (University of Trento, 2025) and 10+ years across industry and academia, and I build end-to-end deep learning and ML systems that run in production. Your posting asks for deep learning, scaling models, CI/CD and data pipelines feeding ML models, and that is the core of what I have done.

Three parts of my work match directly. For production ML at scale, I led computer vision and ML systems at MAS Holdings that raised operational efficiency by up to 300%, built on real-time ingestion and ETL pipelines for high-frequency data across distributed sites, and I set up code review and CI/CD practices to speed ML adoption across teams. For deep learning and monitored deployment, my published system runs at 14 ms on a Raspberry Pi 4 with F1 0.76, 74x faster than the DTW baseline (Journal of the Audio Engineering Society, 2026), and I owned its lifecycle from data acquisition to deployment and monitoring. For risk-sensitive data work, at Forestpin I designed ML and statistical modeling pipelines for financial forensics, compliance monitoring and risk detection on large structured enterprise datasets, working directly with compliance and risk stakeholders.

I should be direct about the gaps. I have not worked inside a bank or under a formal model risk framework, and I have not yet worked with your specific platform stack. My pipelines have run on AWS with Airflow, Docker and MLflow, and I expect to pick up your tooling quickly. What draws me to BMO is applying ML to financial data where accuracy, auditability and reliability all matter. Within the first months I would aim to contribute to model quality and the robustness of retraining and monitoring.

I am a Canadian permanent resident based in Toronto, ON, eligible to work without sponsorship, and available immediately. I would welcome the chance to discuss how my experience can support your machine learning team at BMO. My portfolio, publications and open datasets are available at nishal.xyz.

Sincerely,

Nishal Stanislaus Silva, PhD
