Re: Senior Researcher, Computer Vision and Image Processing – Huawei Canada

Dear Hiring Manager,

I am applying for the 12-month Senior Researcher role in Computer Vision and Image Processing at Huawei Canada. I hold a PhD (University of Trento, 2025) and have 10+ years across industry and academia, with 10+ peer-reviewed publications. Noah's Ark Lab's aim of moving research into real products matches how I work: I have taken ML and computer vision prototypes through to deployed systems, and then written them up.

Three parts of my work relate to your posting. For image processing and vision in production, at MAS Holdings I led OpenCV-based inspection systems, including a care-label checker that cut inspection time by 99.5% and raised operational efficiency by up to 300%, and I designed the camera-based image-warp alignment algorithm behind Promptly, a two-sided garment printing product now deployed in four countries. For generative models, at McGill University I prototyped diffusion-based and VAE-based synthetic data generation to improve robustness under limited labeled data. For research output, my real-time pattern detection system runs at 14 ms on a Raspberry Pi 4, 74x faster than the DTW baseline (Journal of the Audio Engineering Society, 2026), and I released four open datasets on Zenodo. At MAS I also mentored engineers and set up code review and CI/CD practice.

I should be direct about the gaps. My generative work used audio data, not images, so I have not built image generation, editing or super-resolution models, and my publications are in audio, IEEE and embedded ML venues rather than CVPR, ICCV or NeurIPS. I have done the diffusion and VAE experiments hands-on and I am ready to apply them to image problems. I work fully in English; my French is at A2 level, which the posting notes is not required.

I am a Canadian permanent resident based in Toronto, eligible to work without sponsorship, and available immediately for a Markham-based contract. I would welcome the opportunity to discuss how I can support the Noah's Ark Lab team at Huawei Canada. My portfolio, publications and open datasets are available at nishal.xyz.

Sincerely,

Nishal Stanislaus Silva, PhD
